

Meta WhatsApp Business Cloud API

Setup Guide

Complete step-by-step guide to set up official Meta WhatsApp Cloud API for automatic order notifications — no QR scanning, no third-party tools, free for 1,000 messages/month.

Project: SS Crackers — [sscrackers.in](#)

Date: June 2026

API Version: Meta Graph v20.0

Prepared by:
Antigravity AI

What You Will Achieve

Feature	Before (Green API)	After (Meta Cloud API)
QR Code Scanning	'L Required every time	' Never needed
Auto-send on Order	' Yes	' Yes
PDF Invoice in WhatsApp	' Yes	' Yes
Provider Trust	Third-party (Green API)	Official Meta / Facebook
Cost	Free	Free — 1,000 msgs/month
Reliability	Moderate	' Enterprise Grade

What You Need Before Starting

A Facebook account · A phone number for WhatsApp Business · Access to server config.php · About 20–30 minutes of time

STEP 1 — Create Meta Developer App

Setting up your developer account and WhatsApp app on Meta

1 Go to Meta Developers Portal

Open your browser and visit: developers.facebook.com

2 Log In with Your Facebook Account

Click "Log In" at the top right corner. Use your personal or business Facebook account. If you don't have one, create a free account at facebook.com first.

3 Click "My Apps" ! "Create App"

After logging in, click "My Apps" in the top right corner, then click the green "Create App" button.

4 Choose App Type: "Business"

You will see options: Consumer, Business, Gaming. Select "Business" and click Next.

5 Fill In App Details & Create

App Name: SS Crackers WhatsApp
App Contact Email: your email address
Business Account: Skip or select your business if available
Then click "Create App" to finish.

STEP 2 — Add WhatsApp Product to Your App

Enabling WhatsApp messaging capabilities in your developer app

1 Find "WhatsApp" in the Products List

After the app is created, you'll see a dashboard. Scroll down to "Add products to your app" section. Find "WhatsApp" and click "Set Up".

2 Accept Terms & Continue

Meta will show WhatsApp Business Platform terms. Accept and continue. You will be taken to the WhatsApp Getting Started page.

3 You Are Now on the API Setup Page '

The left sidebar will show WhatsApp !' API Setup.
This is where all your credentials are. Keep this page open — you need it next.

& p **Important: Stay on the API Setup Page**

The next step requires copying credentials directly from the WhatsApp !' API Setup page. Do not navigate away from this page yet.

STEP 3A — Copy Your API Credentials

Getting Access Token and Phone Number ID from the Meta console

On the WhatsApp !' API Setup page, you will find two critical credentials. Copy them and save in a safe place (e.g., Notepad).

CREDENTIAL #1

Ø=Ý Temporary Access Token

A long string starting with "EAA..." — used to authenticate API calls.

Ø=ÜÍ API Setup page !' "Temporary access token" !' Click "Copy"

CREDENTIAL #2

Ø=Üñ Phone Number ID

A numeric ID like "123456789012345" — NOT the phone number itself.

Ø=ÜÍ API Setup page !' "Phone number ID" field !' Click "Copy"

Ø=P Phone Number ID " Phone Number!

The "Phone Number ID" is a long numeric ID like 123456789012345. It is NOT your actual WhatsApp number like +91 95855 58912. Copy the Phone Number ID, not the phone number.

STEP 3B — Add Owner Number as Test Recipient

Before Meta sends messages, your number must be verified

1

Find the "To" Section on API Setup Page

On the API Setup page, scroll to the "Send and receive messages" section. You'll see a "To" field with a dropdown/selector.

2

Click "Manage Phone Number List"

Click the dropdown !' click "Manage phone number list" !' click "Add phone number".

3

Enter Your Owner's WhatsApp Number

Enter: +91 95855 58912 (the number that should receive all order alerts).

4

Enter the Verification Code

WhatsApp will send a 6-digit OTP to that number. Enter the OTP code on the screen to verify. ' Number is now added.

• Test Message Available

After adding the test recipient, you can click "Send Message" on the API Setup page to send a test WhatsApp message and verify the connection works before updating the website config.

STEP 4 — Update config.php on Your Server

Paste credentials into the website configuration file

Open your server's api/config.php file via cPanel File Manager or FTP and update the WhatsApp section:

```
PHP — API/CONFIG.PHP

// =====
// WHATSAPP via META BUSINESS CLOUD API
// =====

define('META_WA_ACCESS_TOKEN', 'EAAxxxxxxxxxx...'); // !• Paste token here

define('META_WA_PHONE_NUMBER_ID', '123456789012345'); // !• Paste Phone Number ID

define('META_WA_TARGET_PHONE', '919585558912'); // ' Already set correctly

define('META_WA_ENABLED', true); // !• Change false !' true
```

& p Temporary Token Expires in 24 Hours!

The token from API Setup page expires after 24 hours. This is only for testing. You MUST create a permanent System User Token (Step 5) before going live on sscrackers.in.

Ø>Ÿ Step 4B — Test the Integration

Place Test Order
on Website

PHP Calls
Meta Cloud API

Meta Sends
WhatsApp Msg

Owner Receives
Order Alert '

1

Save config.php on Server

After pasting credentials, save the file via cPanel File Manager.
Make sure META_WA_ENABLED is set to true.

2

Place a Test Order on sscrackers.in

Open your website, add products to cart, fill the order form, and place the order.

3

Check WhatsApp on Owner's Phone

Within a few seconds, +91 95855 58912 should receive the complete order details message automatically — no manual action needed!

STEP 5 — Create Permanent Token (Never Expires)

Required before going live — temporary token expires in 24 hours

Do This Before Going Live on sscrackers.in!

The Temporary Access Token from Step 3 expires every 24 hours. If you skip this step, WhatsApp notifications will stop working after one day.

1 Go to Meta Business Suite

Visit business.facebook.com !' Log in !' Click "Settings" (gear icon in the left sidebar).

2 Create a System User

In the left sidebar: Users !' System Users !' Click "Add"
Name: SS Crackers Bot Role: Admin !' Click "Create System User"

3 Assign App Permission to System User

Click on your new system user !' Click "Assign Assets" !' Select "Apps"
! Choose your "SS Crackers WhatsApp" app !' Enable "Full Control" !' Save.

4 Generate the Permanent Token

Click "Generate New Token" !' Select your app
! Check permission: whatsapp_business_messaging
! Click "Generate Token" !' COPY and SAVE the token immediately (it won't be shown again).

5 Update config.php with the Permanent Token

Replace the temporary token in config.php (Step 4) with this new permanent token.
This token never expires unless you delete the system user.

STEP 6 — Going Live (Optional)

Send to any WhatsApp number, not just verified test recipients

Test Mode vs Live Mode

In test mode, you can only message verified test recipients. To send to any number (e.g., multiple staff), go live with a verified business number in Meta Developer Console !' App Dashboard !' Click "Go Live".

Final Checklist — Setup Complete

- Meta Developer App created with WhatsApp product added
- Access Token copied from the API Setup page
- Phone Number ID copied (NOT the phone number itself)
- Owner's number +91 95855 58912 added as test recipient and OTP verified
- config.php updated with credentials and META_WA_ENABLED = true on server
- Test order placed on sscrackers.in and WhatsApp message received
- Permanent System User token created at business.facebook.com
- Permanent token replaced in config.php — token never expires again!

You're All Set!

SS Crackers will now automatically send WhatsApp order notifications via the official Meta API — no QR scanning ever again, 1,000 free messages per month, enterprise-grade reliability from Meta/Facebook.
